Existing ABIDE I source pool: 182 (90 ASD / 92 controls)
Age 18–30; observed FIQ >80 → 140 (69 ASD / 71 controls)
Fixed coverage-qualified CC200 network: 106 nodes
Downloaded filtered ROI series
GSR and no-GSR
Local Fisher-transformed FC
Downloaded fALFF maps/masks
Upstream computation
Local ROI means / relative states
Static H; pairwise configurations; global/local efficiency
Within-network and between-network descriptors
Null configurations
All 140 participants
Both diagnoses
Adjusted group models
136 (67 ASD / 69 controls)
Site, age, FIQ and FD
Clinical / prediction
Score-wise missingness
Site-held-out models
